

Grizzly Wood™

Recycled Plastic Lumber

Grizzly Wood is a recycled plastic lumber (RPL) made from a combination of high density polyethylene (HDPE), low density polyethylene (LDPE), and Polypropylene (PP). Our manufacturing process utilizes recycled content which helps stop plastic from entering our landfills by converting recycled plastic into durable, environmentally friendly, economical, and easy to maintain construction materials.

You will never need to sand, stain, paint, or waterproof your plastic lumber. Installation is easy and requires no special tools. Grizzly Wood cuts, routers, planes, screws and nails with the tools you already have. The smooth surface is resistant to moss growth, making it an ideal material for outdoor applications. Plus, Grizzly Wood is easily cleaned with regular cleaning products or pressure washing.

Applications include landscaping (retaining walls, dividers), gardening (edging, boxes), fencing (posts, rails), shipping (pallets, dunnage), site furniture (planters, playgrounds, tables, benches), decking (patios, docks), stairs (rails, steps), and walkways.

Durable ■ Environmentally Friendly ■ Easy to Maintain ■ Economical
