

Our Mission: Create a sustainable solution to the plastic waste covering our shorelines and filling our landfills.

At APR we are dedicated to preserving the health of our oceans and beaches by collecting plastic marine debris from our local shorelines and turning it into useful products that can benefit our local Alaskan communities. This debris poses a significant threat to marine life and ecosystems in Alaska. We carefully gather and process this debris into our very own Grizzly Wood. Through innovative recycling techniques and sustainable practices, we transform collected plastic waste into high-quality, usable products that serve the needs of our communities.

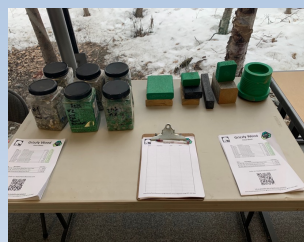

From durable outdoor furniture to eco-friendly building materials our products reflect our commitment to turning environmental challenges into opportunities for positive change.

April was a whirlwind of activity as we joined hands with our local communities to celebrate Earth Day! From teaching the next generation about sustainable recycling to eco-friendly fairs, we were thrilled to participate in several events. A big shoutout to everyone who supported us in this meaningful endeavor. Together, we're making a difference for our planet!

April Events:

- April 3rd presentation to Alaska Northern Chapter.
- April 10th – 12th Alaska Trails Conference.
- April 18th Valley Community Recycling Solutions.
- April 18th KTNA Radio Interview.
- April 20th Denali Education Center Earth Day Event in Talkeetna .
- April 20th Habitat for Humanity Earth Day Event in Anchorage.
- April 23rd Presentation to Dimond High School.
- April 25th Presentation to Seward Elementary.

Fun Facts!

Recycling 1 ton of PET  a year saves 7.4 cubic yards of landfill space!

From this to this!

Recyclable Plastic

Ever wondered about the process behind the recycled plastic lumber? It all starts with the recycled plastics we collect. Using cutting-edge equipment, we shred the plastic into small pieces, then melt it down to form a versatile, durable product. Through Innovation we transform waste into a useable resources, contributing to a greener, more sustainable future.

Grizzly Wood
